

Wayne

Senior Manager · AI Application Engineering

Architect · Build · Deliver

Master of Information Engineering
National Taiwan University of Science and Technology (NTUST)
Email **Wayne_Hong@asus.com** · Location **TPE HQ BU-DIT**

More About Me

CAREER HISTORY

ASUS · Nov 2019 – Present

Nov 2019	May 2022	Jul 2023	Aug 2026
Engineer	Senior Engineer	Specialist	**Senior Manager**

SUMMARY

- 7 years of experience developing customer-facing, AI-powered desktop and web applications.
- Architects applications end to end; accelerates delivery with AI coding assistants and builds internal tools, CI/CD pipelines and development guidelines.
- Positive, approachable team player and clear communicator; works closely with designers, PMs and engineers and has led a team of 4–6 engineers as a Tech Lead.
- Received an **Excellent** performance rating in both 2023 and 2024.

SKILLS

Languages	C#, Python, JavaScript, TypeScript
AI-Assisted Development	Claude Code, Codex, Figma Make
Frontend & Backend Development	HTML, CSS, Vue, FastAPI, PostgreSQL
Desktop Application Development	.NET, WPF, Electron, WinForms
UI/UX Design	Figma
Version Control & CI/CD	Git, GitLab, GitLab CI, Jenkins, Git Flow
AI Application Integration	LLM APIs, Prompt Engineering, Function Calling, AI Inference Services, AI Result Visualization, Image Annotation Tool Development

EXPERIENCE

AISDetector 1.0–2.0 | AI-powered signal processing software

- Architected the app from scratch, independently owning the database schema, backend services, frontend and desktop packaging.
- Owned the end-to-end LLM integration for natural-language app control, guided workflows and automated result interpretation, reducing operation steps and manual review time.
- Built signal visualization and the AI inference review workflow, integrated inference services and optimized large-scale data processing.
- Designed the entire UI/UX in Figma, iterating with PMs and engineers.

AISVision 1.0–1.6 | AI-powered image recognition software

- Developed the app from the ground up with designers, PMs and engineers, including inference result visualization and AI service integration.
- Independently built its complex image annotation features and workflow.

AISVision 365 | Cloud-based web version of AISVision

- Led 4–6 engineers as a Tech Lead, coordinating with designers and PMs.
- Personally implemented the core annotation features and complex interactions: coordinate transforms, polygon editing, batch operations, undo/redo, correction of AI-generated annotations and tool state management.

Dongle Burner | Internal tool for updating Dongle devices

- Redesigned and independently rebuilt the legacy version, owning UI/UX design, development, CI/CD and release; used by R&D, QA, customer service and repair teams.

PATENT APPLICATIONS

Lead inventor	Recording AI Software Operation Behavior via Recursive Capture and a Unified Interface
Contributor	Smart Checkout Assistance System for Small and Medium-Sized Retail Stores, Log Analysis Tool for AI Collaboration Software, Transformer-based 3D Surface Reconstruction Method, Smart Warehouse Space Optimization Assistance System
